Bangkok, Thailand

WORK EXPERIENCE

Zimple Media - UX/UI Designer

2021 - 2026, Digital Platform, Bangkok

- Led the end-to-end redesign of Propertyhub and Renthub across web and mobile apps, while serving as the sole designer for other company products—owning research, user flows, UI design, prototyping, and handoff.
- Designed a 4-step GA4 Funnel Exploration to compare the redesigned project pages with the legacy design over comparable periods. Identified a consent-gate skew at the entry step and focused analysis on the mid-to-bottom funnel, where the new design increased the contact-agent conversion rate from 1.6% to 3.0% of sessions.
- Owned design decisions from business requirements through research, ideation, testing, and handoff—working closely with engineering to find the best solutions within technical constraints.

Bulk One Group - Junior UX/UI Designer

2018 - 2021, Startup, Bangkok

- Designed end-to-end experiences for Bulk's core construction-tech products and adapted them to client-specific needs, working within a structured Scrum process (Product Owner → PM → Scrum Master) and facilitating design updates throughout each sprint.
- Ran field research on active construction sites and at client offices — gathering requirements, observing real users during training programs, and feeding on-site findings back into design iterations.
- Won 1st place in a company-wide hackathon with AWS, designing a facial-recognition concept for construction use cases based on on-site insights. The concept was later developed into a real product, with a study trip to Singapore awarded as the prize.

EDUCATION

Silpakorn University

B.Sc. Information & Communication Technology

Major in Web & Interactive Media Design

SKILLS

UX: Research, User Flows, Wireframing, Prototyping, Usability Testing

UI: Visual Design, User Interface Design, Design Systems, Responsive & Mobile UI

Tools: Figma, Photoshop, Illustrator

AI-Assisted Workflow: AI Design Workflow, AI Prototyping
